PIZZA SALES REPORT

5 May, 2024

INTRODUCTION

Welcome to our Pizza Sales Report Presentation. Today, we delve into a comprehensive overview of our sales performance, exploring the highs, challenges, and strategic insights that have shaped our journey. This presentation is more than just numbers, it's a narrative of our collective efforts, showcasing the impact of our sales strategies and the pathways to future success.

BASIC

01 Retrieve the total number of orders placed.

02 Calculate the total revenue generated from pizza sales.

03 Identify the highest-priced pizza.

04 Identify the most common pizza size ordered

05 List the top 5 most ordered pizza types along with their quantities.

INTERMEDIATE

01 Join the necessary tables to find the total quantity of each pizza category ordered.

02 Determine the distribution of orders by hour of the day.

03 Join relevant tables to find the category-wise distribution of pizzas.

04 Group the orders by date and calculate the average number of pizzas ordered per day.

05 Determine the top 3 most ordered pizza types based on revenue.

ADVANCED

01 Calculate the percentage contribution of each pizza type to total revenue.

02 Analyze the cumulative revenue generated over time.

03 Determine the top 3 most ordered pizza types based on revenue for each pizza category.

SUMMARY

Our project focuses on analyzing pizza sales data using SQL queries to derive valuable insights for a pizza business. We start by retrieving fundamental metrics such as the total number of orders placed and the total revenue generated from pizza sales. Next, we identify key attributes such as the highest-priced pizza and the most common pizza size ordered. Additionally, we list the top 5 most ordered pizza types along with their quantities to understand customer preferences.

Moving into the intermediate phase, we delve deeper into the data by joining tables to find the total quantity of each pizza category ordered. We also analyze the distribution of orders by hour of the day and the category-wise distribution of pizzas. Furthermore, we group orders by date to calculate the average number of pizzas ordered per day and determine the top 3 most ordered pizza types based on revenue.

In the advanced stage, we calculate the percentage contribution of each pizza type to total revenue, providing insights into the relative importance of different pizza varieties. We analyze the cumulative revenue generated over time to understand sales trends and patterns. Finally, we identify the top 3 most ordered pizza types based on revenue for each pizza category, allowing for targeted marketing strategies and menu optimization.
